IBM cloud output:

The screenshot shows the IBM Cloud IoT Platform console. On the left is a dark sidebar with icons for navigation. The top navigation bar includes 'Browse', 'Action', 'Device Types', and 'Interfaces'. A blue 'Add Device' button with a plus icon is on the right. Below the navigation bar, there are tabs for 'Identity', 'Device Information', 'Recent Events', 'State', and 'Logs'. The 'Recent Events' tab is selected. Below the tabs, a message states: 'The recent events listed show the live stream of data that is coming and going from this device.' Below this message is a table with four columns: 'Event', 'Value', 'Format', and 'Last Received'. The table contains four rows of data, all with 'event_1' in the 'Event' column and 'a few seconds ago' in the 'Last Received' column. The 'Value' column contains JSON strings: '{"distance":7,"Alert":"Distance less than 10"}', '{"distance":9,"Alert":"Distance less than 10"}', '{"distance":8,"Alert":"Distance less than 10"}', and '{"distance":9,"Alert":"Distance less than 10"}'. The 'Format' column contains the value 'json' for all rows.

Event	Value	Format	Last Received
event_1	{"distance":7,"Alert":"Distance less than 10"}	json	a few seconds ago
event_1	{"distance":9,"Alert":"Distance less than 10"}	json	a few seconds ago
event_1	{"distance":8,"Alert":"Distance less than 10"}	json	a few seconds ago
event_1	{"distance":9,"Alert":"Distance less than 10"}	json	a few seconds ago
